DocuMind Project Overview

DocuMind is an intelligent AI-powered PDF chatbot built using Retrieval-Augmented Generation.
It utilizes FAISS vector database and HuggingFace MiniLM embeddings for semantic search.
The language model integration is powered by Google Gemini API.

System Architecture and Performance

Page 2 discusses vector representations and chunking strategies.

RecursiveCharacterTextSplitter generates overlapping chunks with 1000 characters and 200 overlap.

Responses are strictly grounded in retrieved context to eliminate hallucinations.
